

Plant stand

Article number: 20064614

Series:

Product description

Vertical green structures are a solution for adding greenery to narrow streets where other forms of greenery – such as trees, planting beds or planters – present challenges.

These metre-high structures are designed to bring greenery into the streetscape. By using climbing plants, green pillars not only help to green up streets, but also contribute to biodiversity in urban areas. A bird's nest can even be incorporated into the green pillar!

Extra information

Dimensions of the green post:

540 x 540 x 5018 mm (L x W x H)

Dimensions of the retaining wall:

ø1000 x 560 mm (L x W x H), of which 180 mm is above ground level
